Vibe Coding

This is **NOT** a vibe-coding course.

Andrej Karpathy ✓
@karpathy

There's a new kind of coding I call "vibe coding", where you fully give in to the vibes, embrace exponentials, and forget that the code even exists. It's possible because the LLMs (e.g. Cursor Composer w Sonnet) are getting too good. Also I just talk to Composer with SuperWhisper so I barely even touch the keyboard. I ask for the dumbest things like "decrease the padding on the sidebar by half" because I'm too lazy to find it. I "Accept All" always, I don't read the diffs anymore. When I get error messages I just copy paste them in with no comment, usually that fixes it. The code grows beyond my usual comprehension, I'd have to really read through it for a while. Sometimes the LLMs can't fix a bug so I just work around it or ask for random changes until it goes away. It's not too bad for throwaway weekend projects, but still quite amusing. I'm building a project or webapp, but it's not really coding - I just see stuff, say stuff, run stuff, and copy paste stuff, and it mostly works.

Two stories about where AI will take us

**AI will solve
everything.**

**AI will end
everything.**

Jevons paradox

The Coal Question, 1865

Better engines burned more coal, not less.

Cheaper work may mean more work, not less.

Answers are cheap. Questions are scarce.

How we should work with AI agents

The agent takes one step. You take the other five.

**If AI can make
almost anything,
what should stay yours?**
