move

An agent acts in an environment

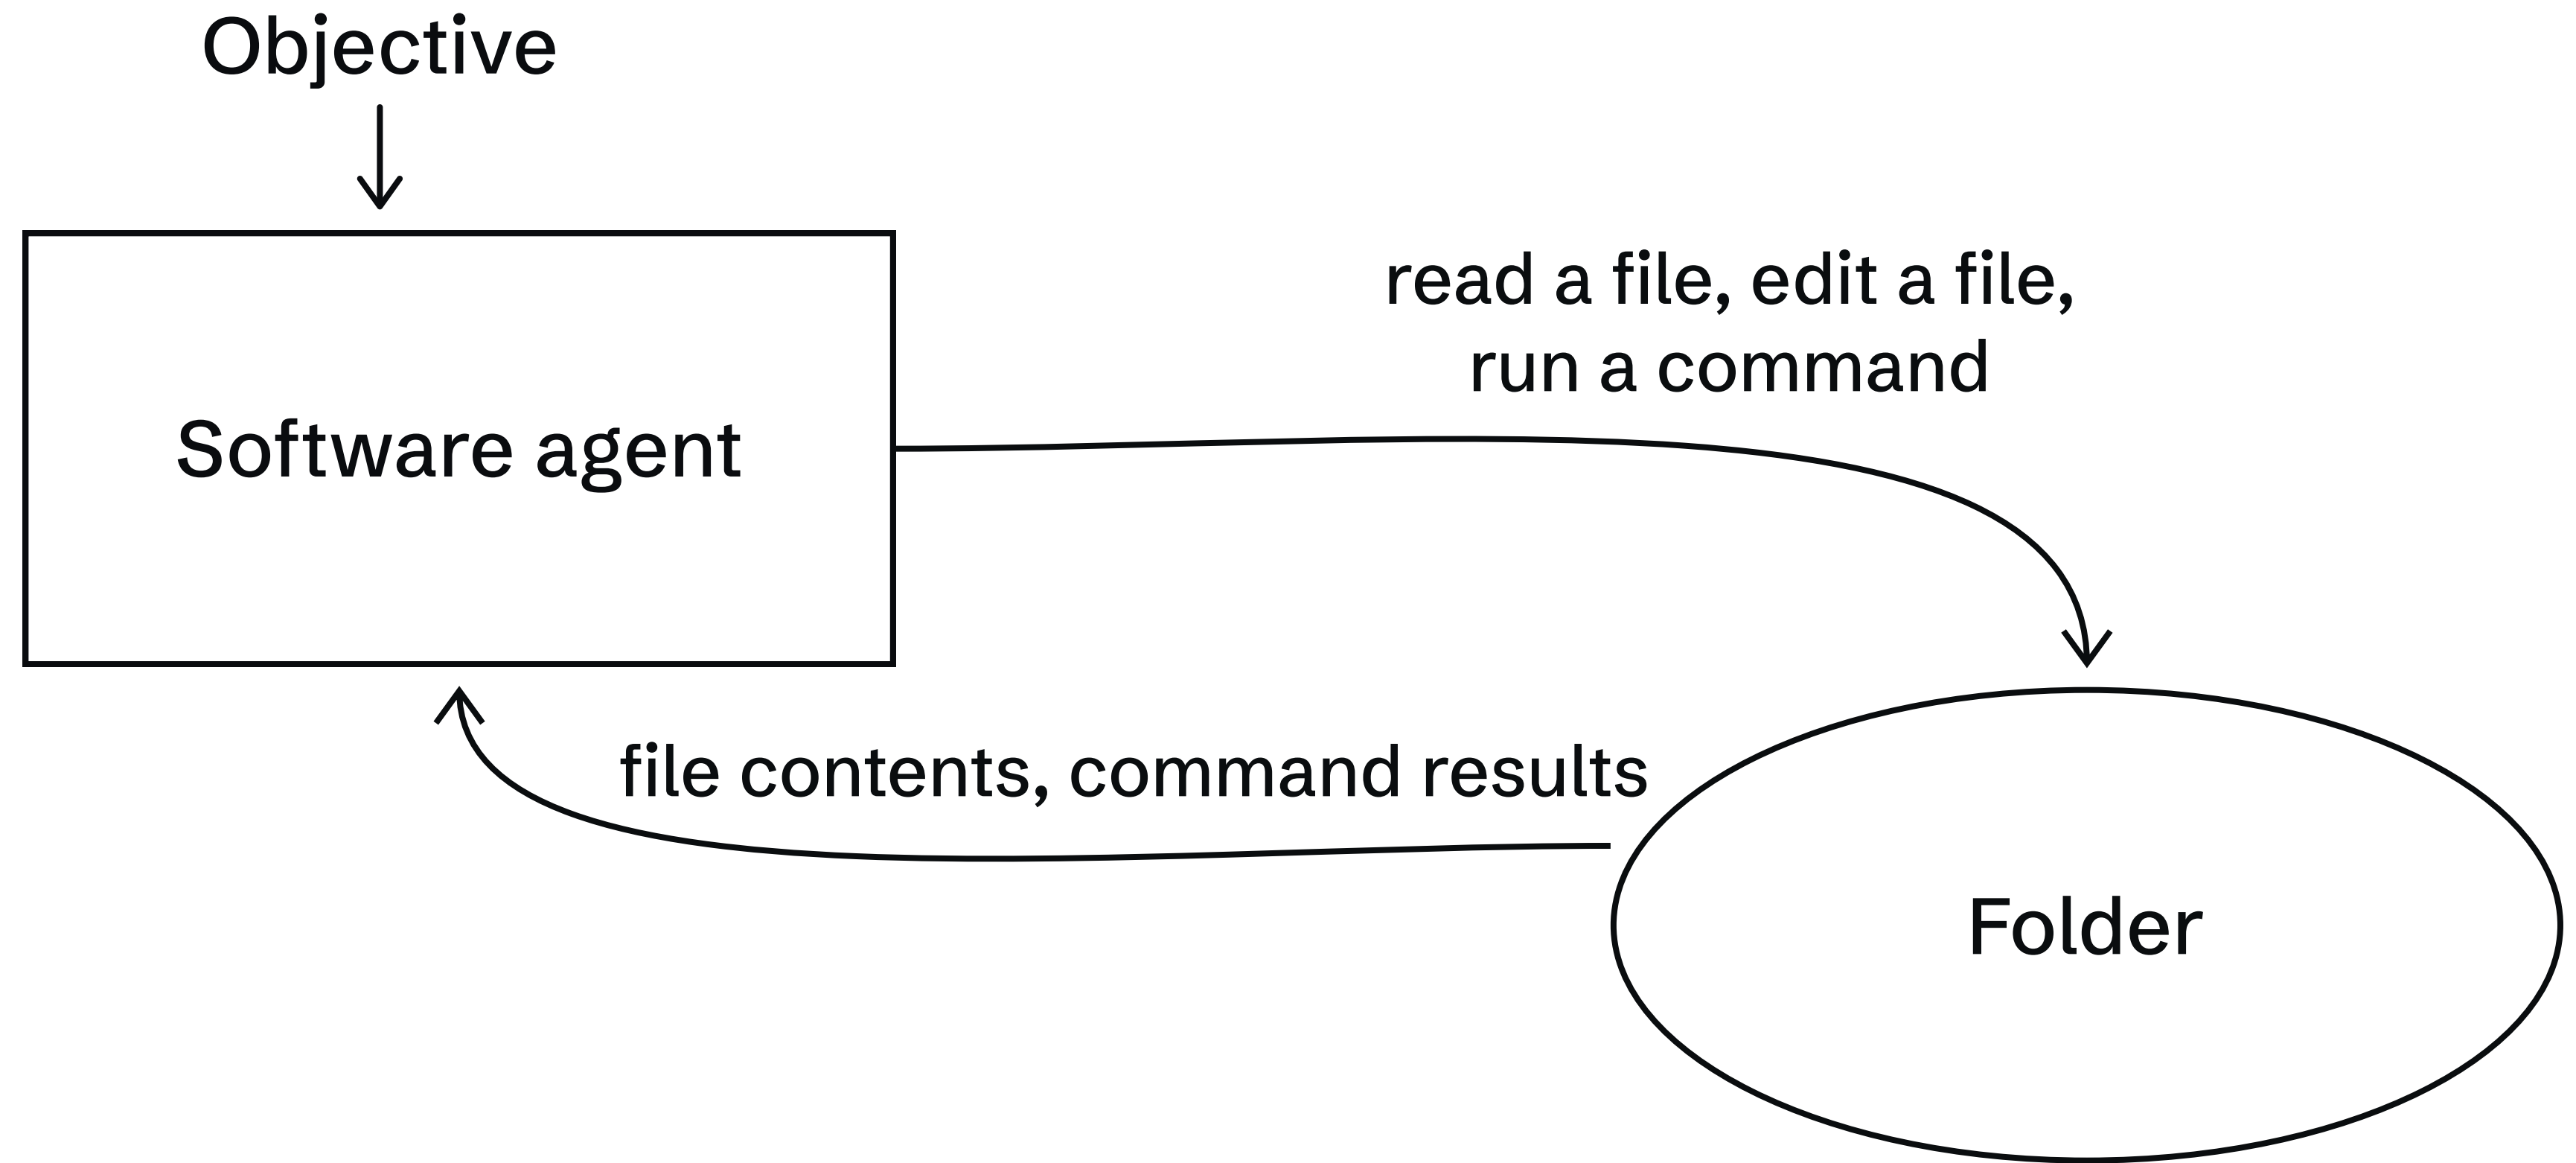

An agent uses what it observes to choose actions toward an objective.

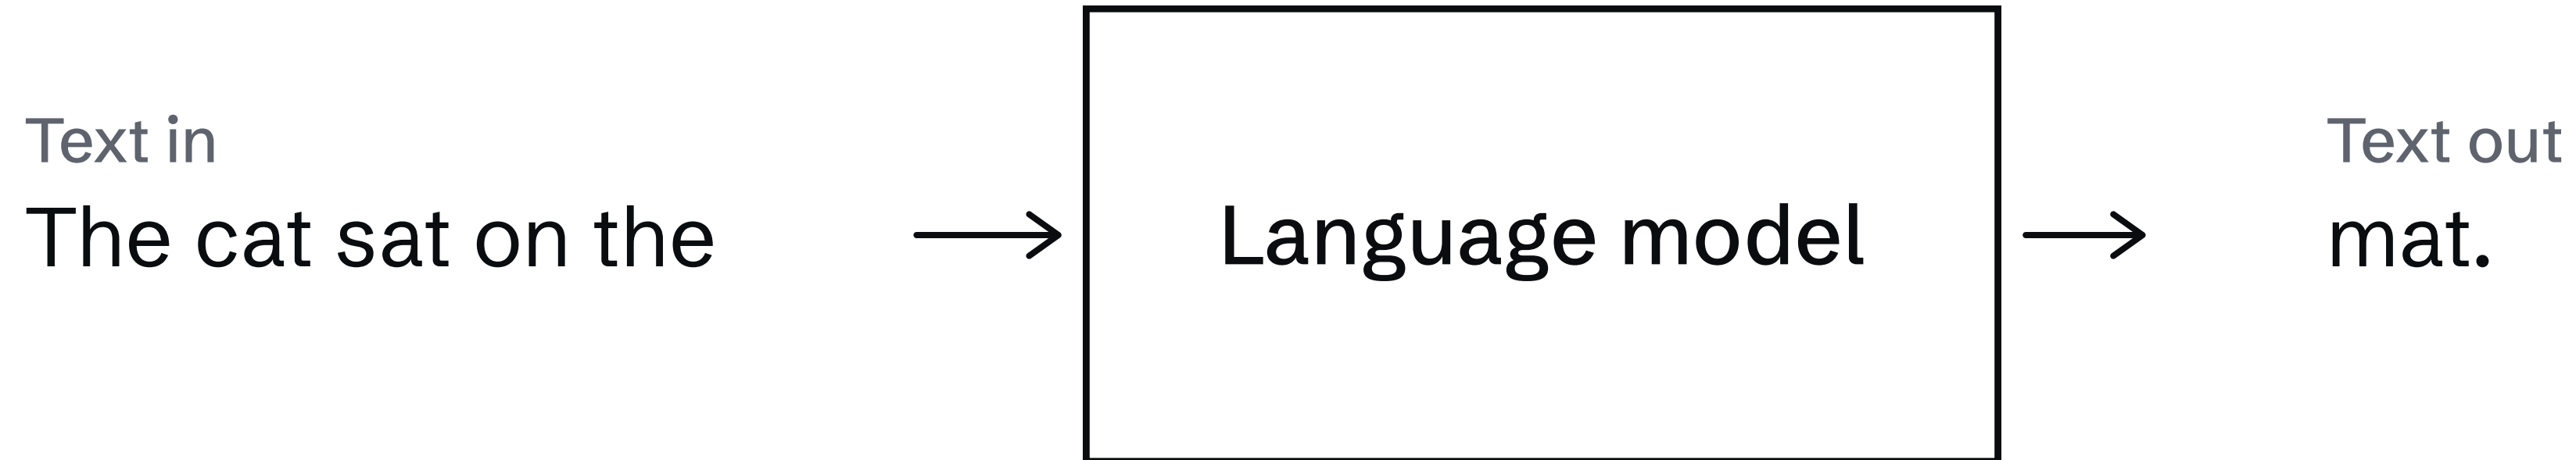

The vacuum is the agent

The environment can be digital

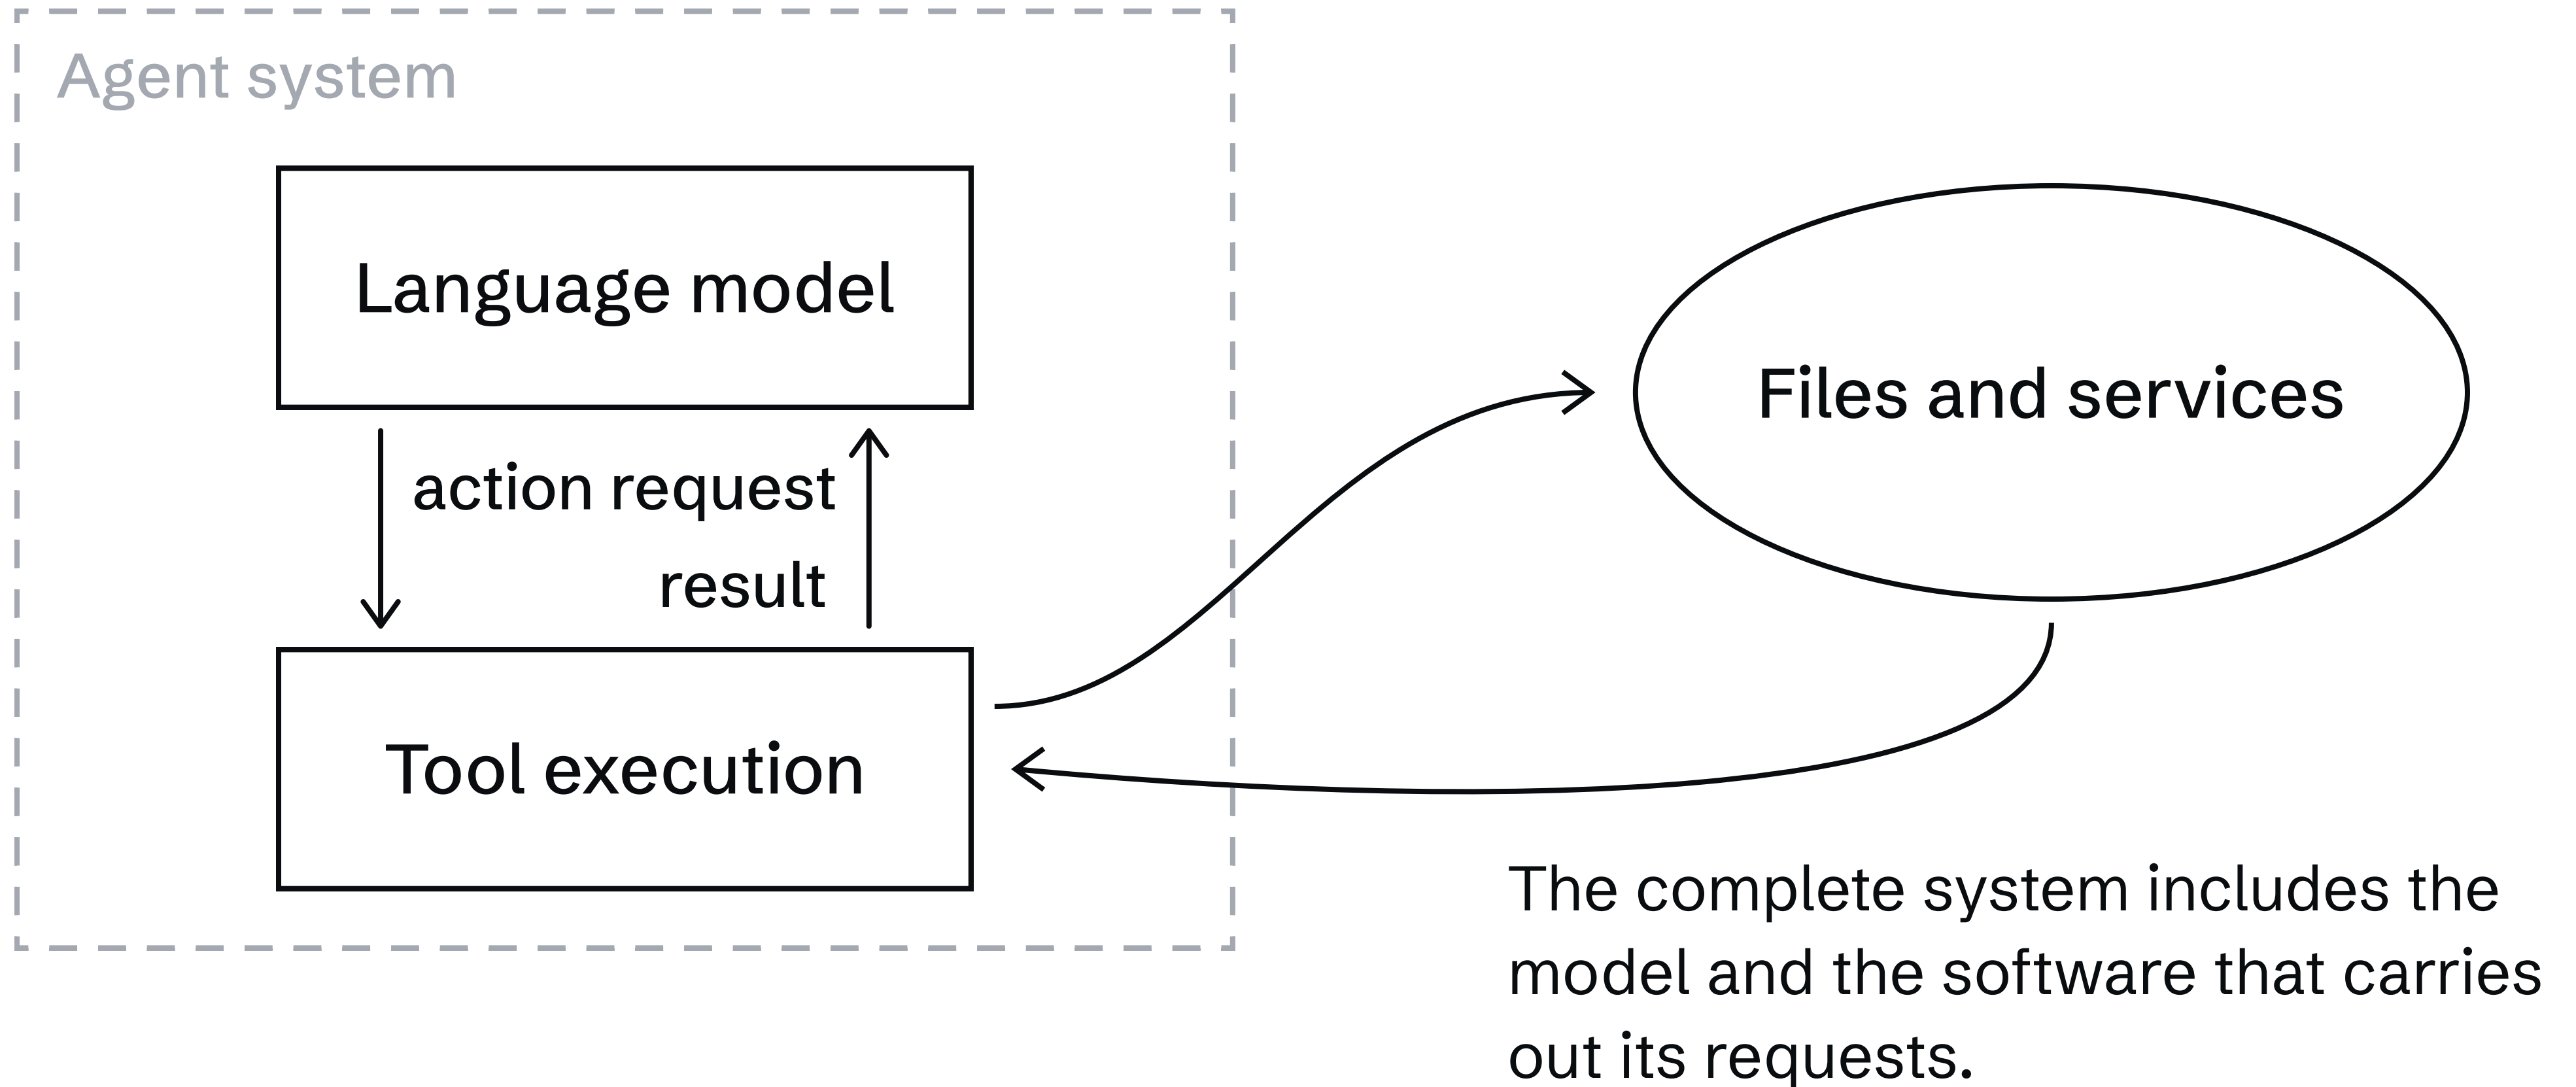

A language model predicts text

It reads text and writes the likely next text.

The model helps choose an action

Now you plan a program

A hypothetical Coachella program, one stage, one day

You are planning a Coachella program

Hypothetical classroom event

Objective

Choose three artists.

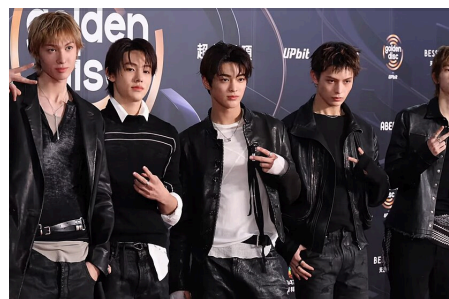

One stage

One day

Candidates

BLACKPINK

CORTIS

aespa

ATEEZ

NewJeans

TWICE

SEVENTEEN

LE SSERAFIM

What must fit? What would make it good?

Requirements

- ☐ Three sets of 45 minutes
- ☐ 30-minute changeovers
- ☐ Stage open 19:00 to 22:30
- ☐ Budget of \$6,000,000

These values are in `event.md`

Preferences

BLACKPINK or NewJeans

~ if available ~

Different performance styles

What do we know so far?

```
zsh

$ cat artists.csv
artist,fee_low_usd,fee_high_usd,source,style
BLACKPINK,2500000,6000000,CTI,EDM/hip-hop/trap
CORTIS,, ,unknown,hip-hop
aespa,500000,749000,CTI,hip-hop/dance-pop/hyperpop
ATEEZ,2000000,2499999,CTI,hip-hop/trap/EDM
NewJeans,, ,unknown,pop/R&B
TWICE,2500000,6000000,CTI,bubblegum pop/dance-pop/EDM
SEVENTEEN,500000,749000,CTI,pop/performance-led
LE SSERAFIM,, ,unknown,pop
```

Choose your lineup

10 min

Work on your own, without AI.

- 1 Choose three artists
- 2 Explain your choices
- 3 List what you still need to check

I can check now

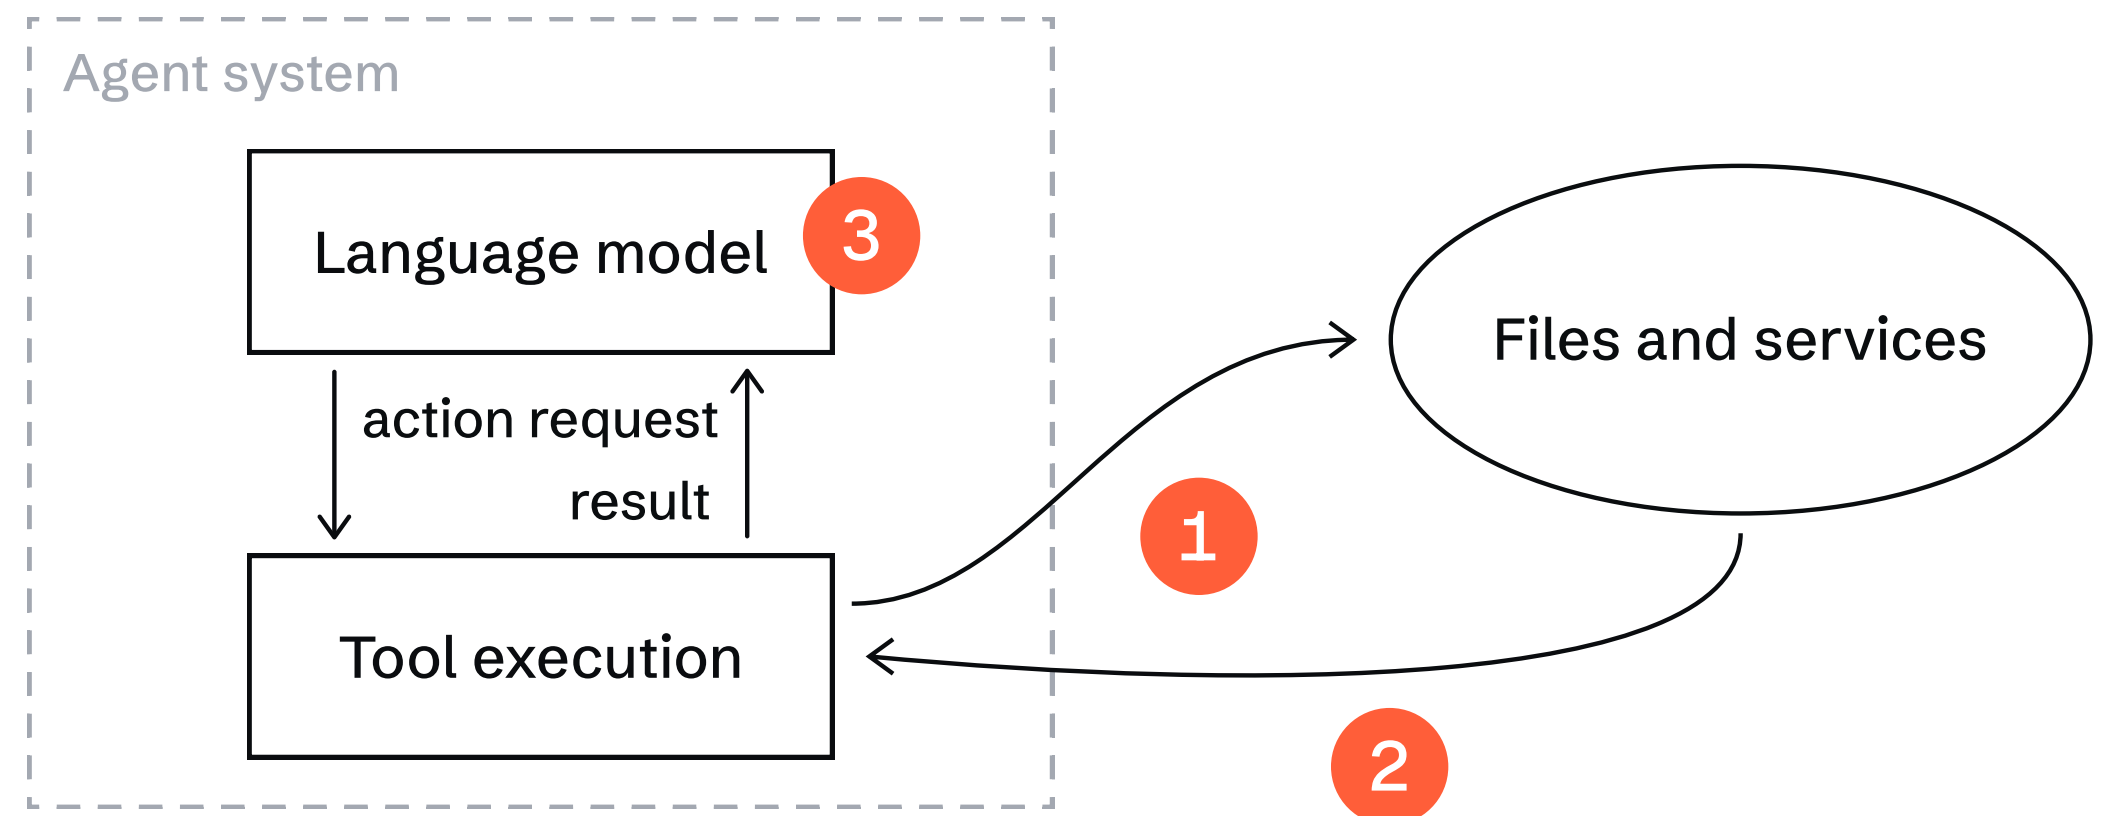

I need to ask

Who did you pick?
What do you still need to ask?

Watch what the agent does

Watch for three things.

- 1 Which files it reads
- 2 What the tools reply
- 3 Which reply changes the plan

The prompt

claude

Plan one stage for one day of a Coachella program.
Pick three acts from `artists.csv`. Follow the budget and the stage hours in `event.md`.
Use `booking.py` to get quotes and availability.
Get a quote for each candidate first. Write down your first choice of three acts. Then stop and wait for me to type continue.
Check availability. If a preferred act is not available, stop again before you choose a replacement.
Make sure all three sets fit the hours.
At the end, give me the lineup, the total cost, the set times, a few sentences on musical variety, and your open questions.
Do not book anything.

Checks

- ☐ Quotes
- ☐ Budget
- ☐ Availability
- ☐ Schedule

What has it checked so far?
What should it do next?

The preferred artists cannot perform

BLACKPINK

CORTIS

aespa

ATEEZ

NewJeans

TWICE

SEVENTEEN

LE SSERAFIM

What should change?
What can stay?

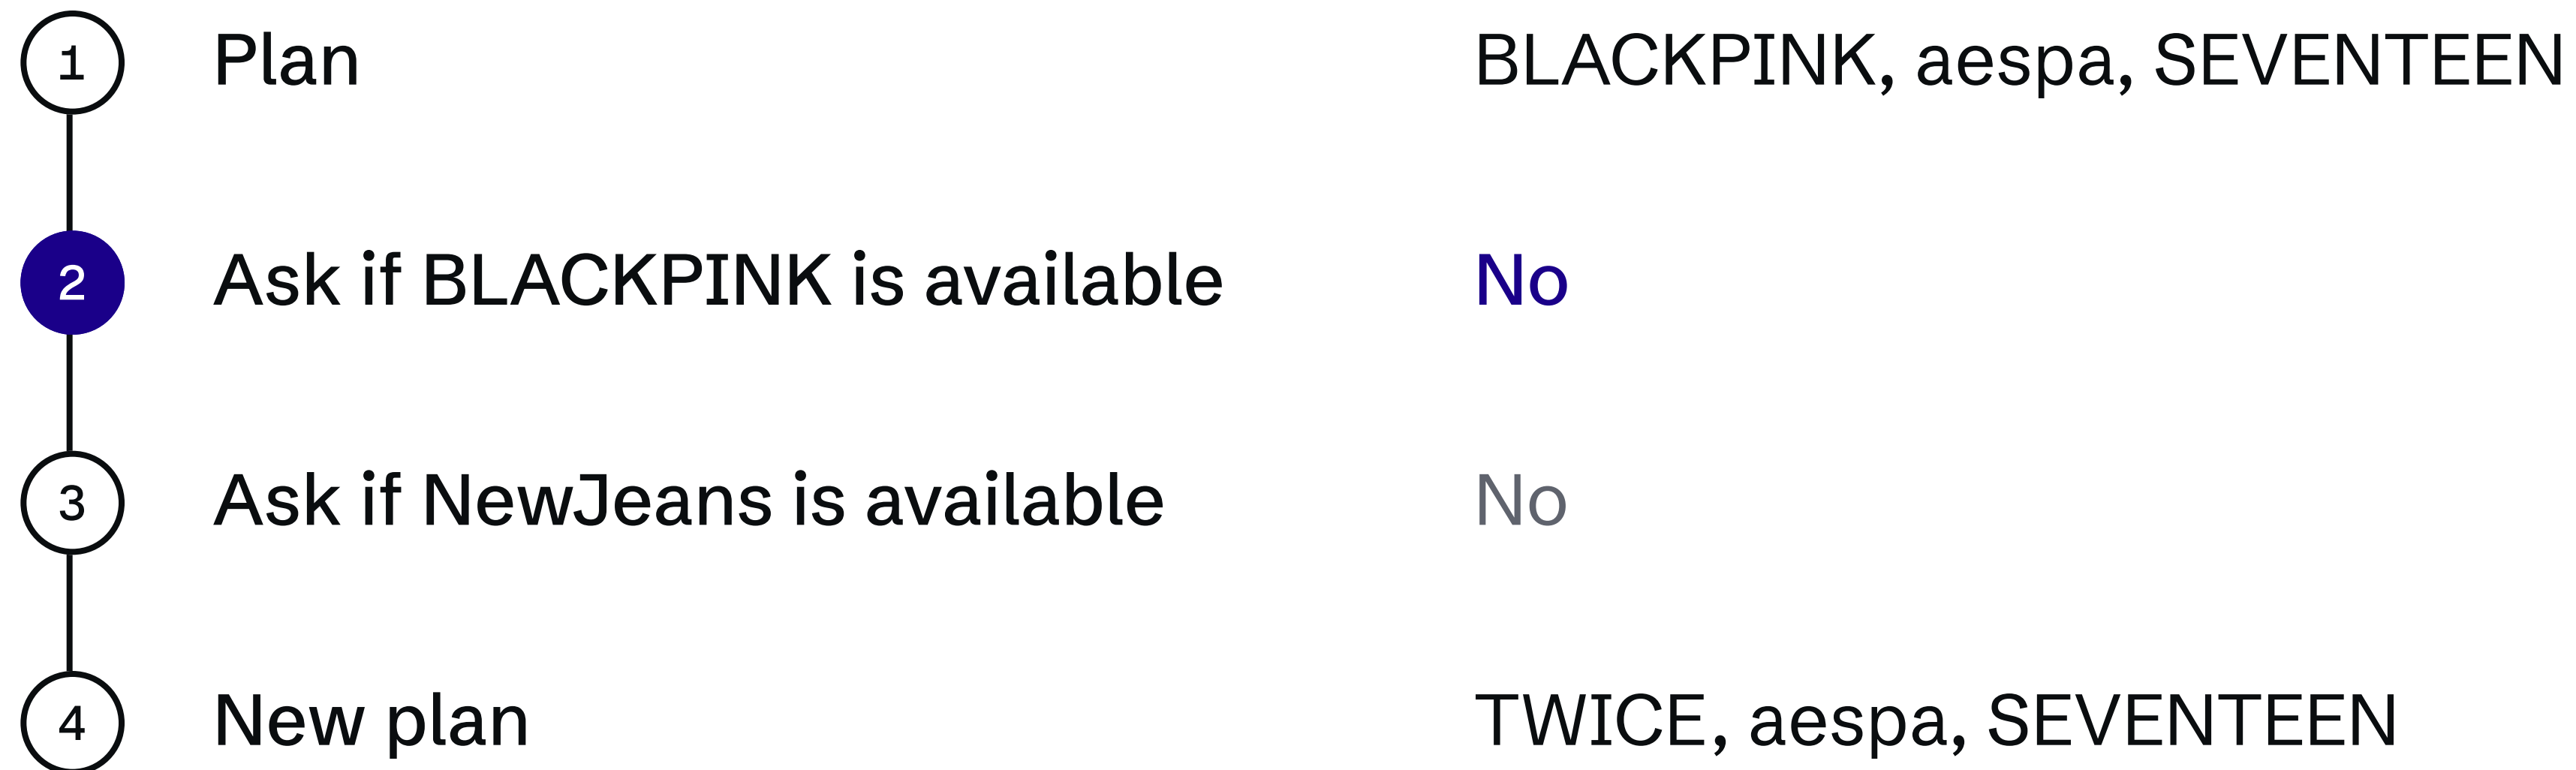

Would you accept this proposal?

Checked	Judgment

What is checked?
What is still a judgment?

One answer changed the plan

Illustrative example

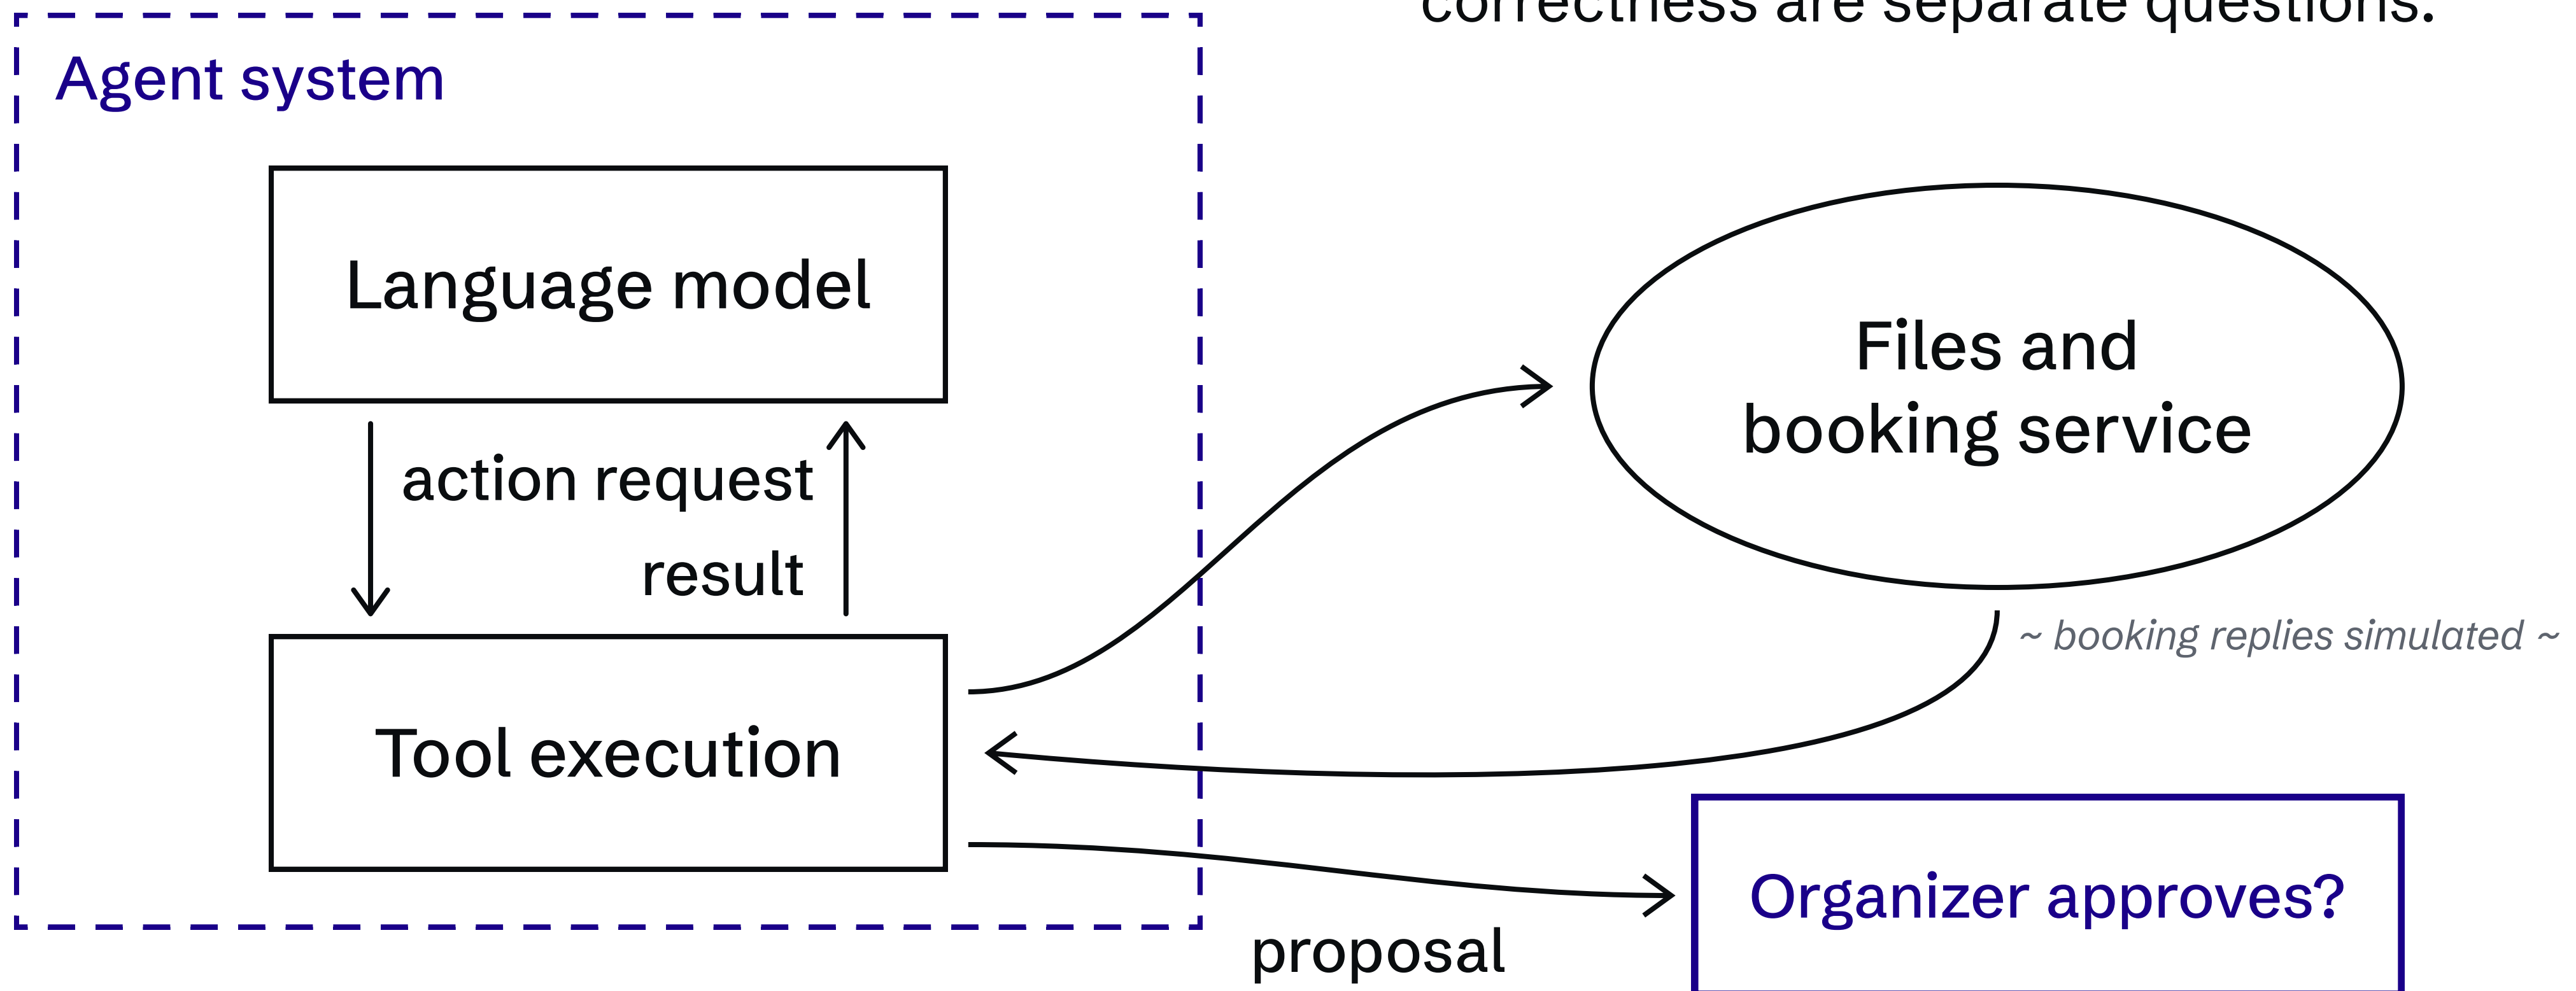

What did it observe? What did it do next?

The live run may differ from this.

Where was the agent?

Intelligence, autonomy, and correctness are separate questions.

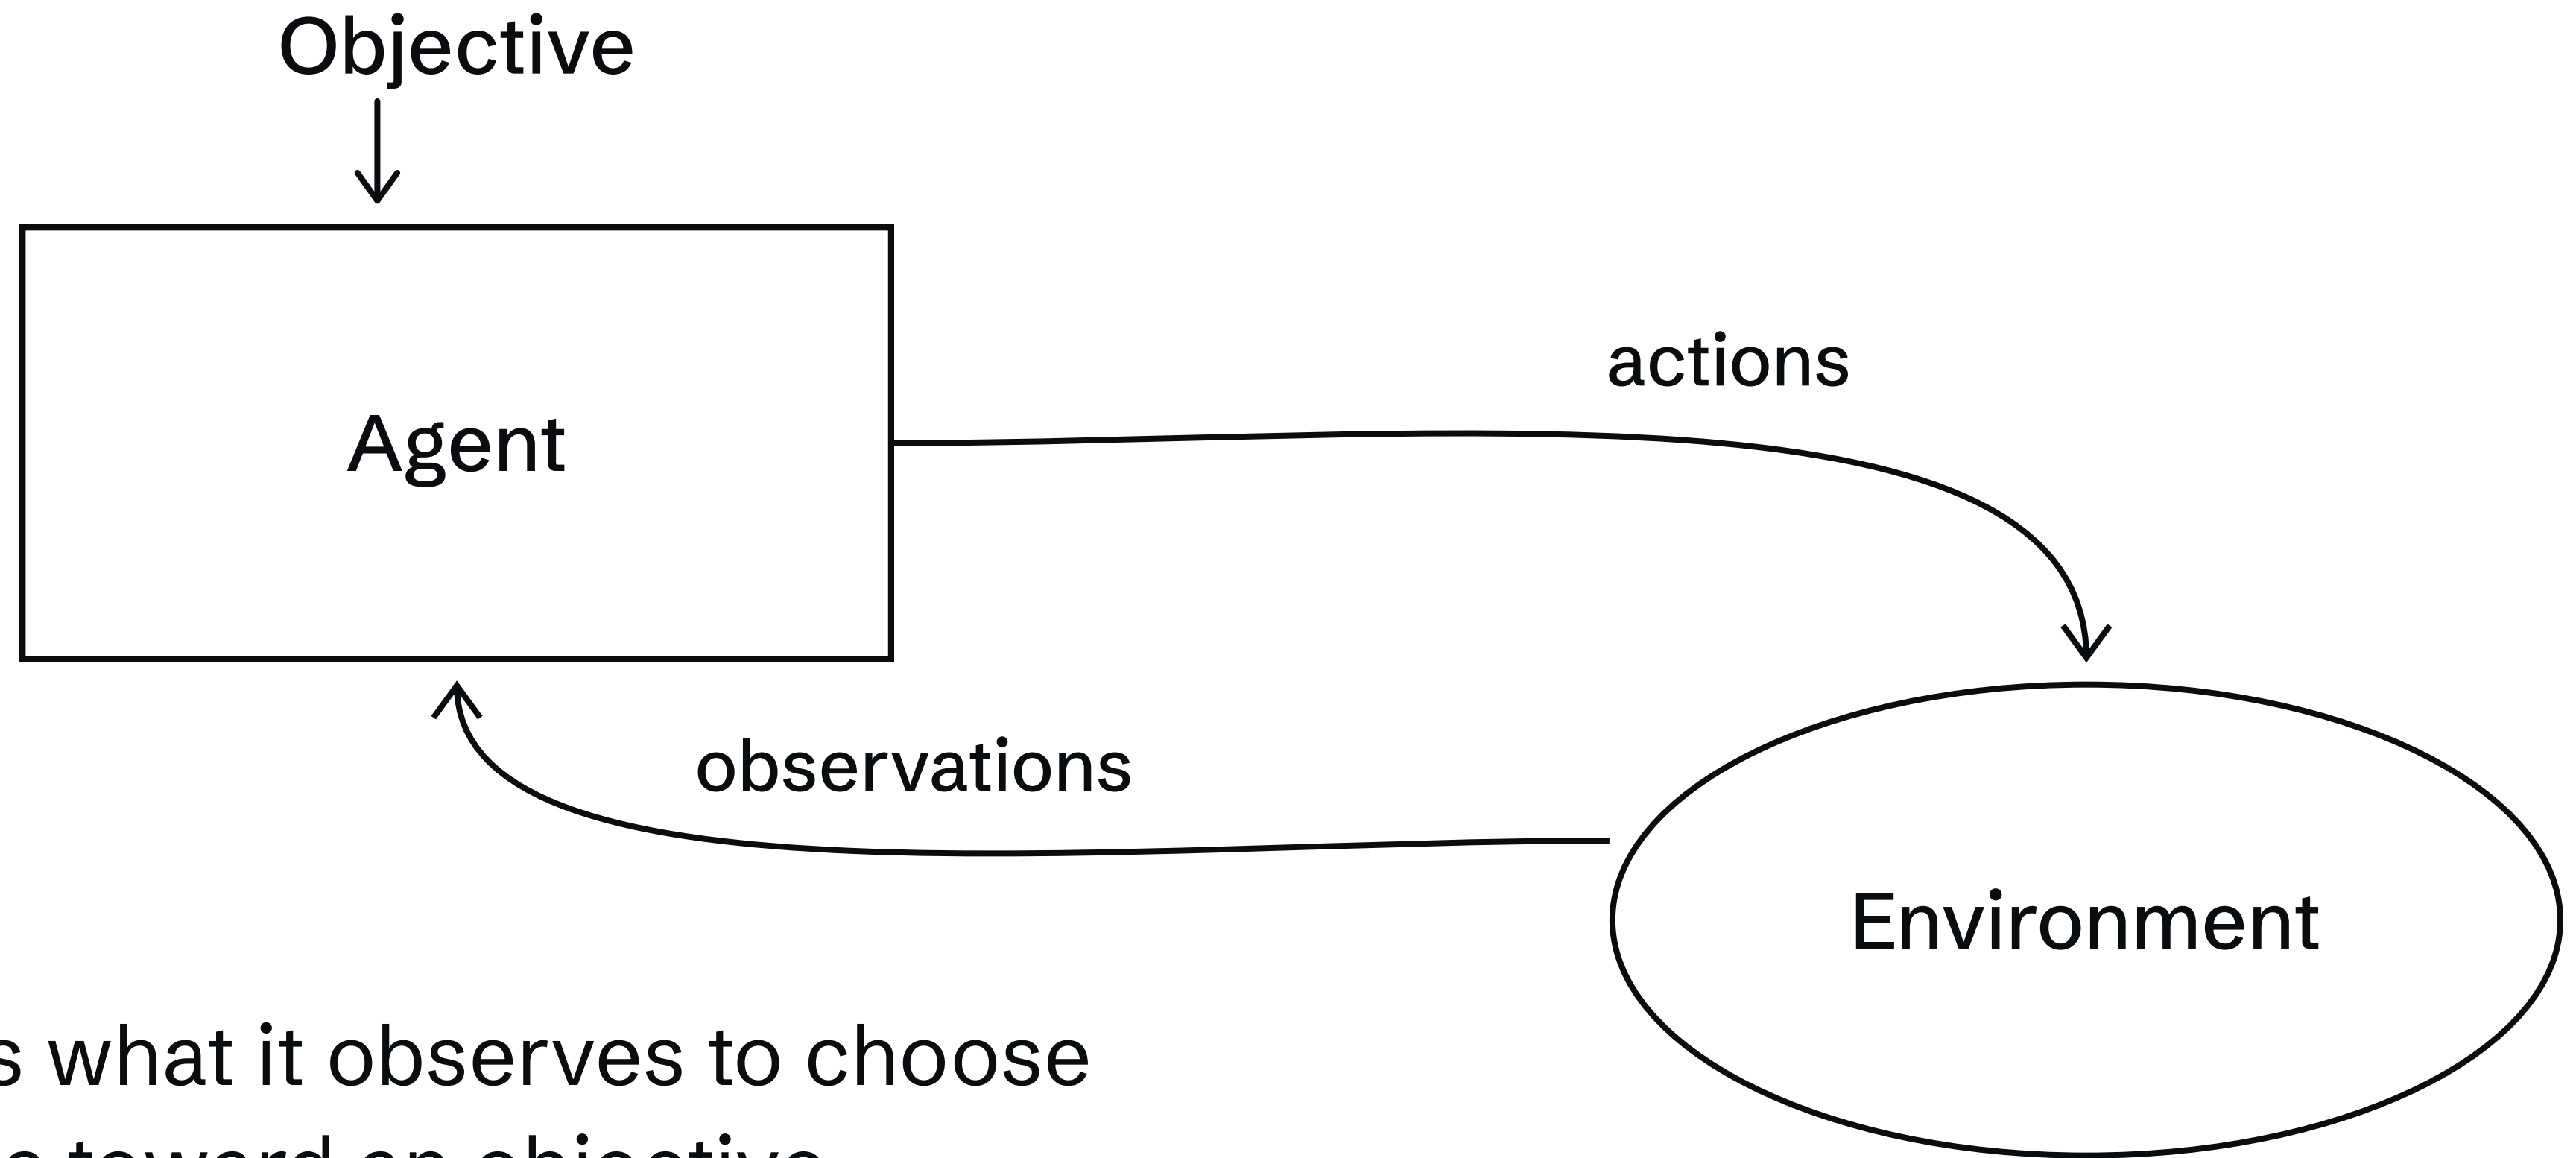

What if it never checked?

**It writes a convincing lineup, but
never asks the booking service.**

What makes a system an agent?

It uses what it observes to choose actions toward an objective.
